

Trusted research. Proven design.

The Lauren Liner's patented Tri-Circle® barrel and proprietary DairyGrade® silicone compound work harmoniously together, creating the perfect milking experience. It's a simpler yet more capable milking inflation.

Lauren AgriSystems continues to refine that experience, pushing design and philosophy to create an even more meaningful interaction between the cow and the milking machine, ensuring healthier teats, fast milking and cow comfort while maintaining impressive liner life.

DairyGrade Compound

- Meets FDA CFR21 177.2600
- Meets 3-A 18-03 sanitary standards
- Bisphenol A (BPA) and phthalate-free
- Nonhalogenated
- Ultra-low carbon content
- Reduces liner waste

Fast milking

Milk your cows quickly and comfortably with the Lauren Liner. The combination of DairyGrade compound and the Tri-Circle barrel creates a higher touchpoint that allows for the required massage to prevent teat congestion, keeping the teat canal fully open for greater milk flow. Research proves that only the Lauren Liner provides consistent and proper massage at the correct vacuum level for fast milking without damaging teat ends.

Fewer squawks

The combination of the patented Tri-Circle liner mouthpiece and the DairyGrade silicone virtually eliminates squawks and liner slips. The pliable material accommodates various teat sizes and creates the best seal during milking.

Guaranteed teat end health

Backed by years of industry-leading research, only Lauren AgriSystems guarantees teat end improvement without compromising milking speed. The Lauren Liner greatly reduces teat end compression by eliminating excessive overpressure and prevents unnecessary pinching and slapping of the teat end during the c- and d-phases of pulsation. Only the Lauren Liner balances milking speed and teat health by matching vacuum level with the energy-absorbing DairyGrade silicone.

Lauren Liner

Lauren Liner Features

The Lauren Liner features are collaboratively designed, working together to provide the perfect milking experience. Cow comfort, milking speed, teat health, liner compression and sustainability were all considered when creating these outstanding features:

- A Tri-Circle® Barrel:** Only Lauren AgriSystems offers the patented Tri-Circle barrel, which under vacuum collapses evenly along the length of the teat, ensuring undue pressure is not placed on the teat end.
- B Material:** Lauren AgriSystems' proprietary DairyGrade® compound absorbs 15 to 20 times less butterfat than typical rubber liners, ensuring long-term consistency in performance.
- C Quality:** Every liner sold is individually inspected, preconditioned and engraved with a unique serial number, providing complete product traceability from raw material to end-user.
- D Mouthpiece:** Combined with the DairyGrade compound, the liner mouthpiece design and bore size ensure optimum cow comfort, less slippage and virtually no squawks.
- E Vents (Optional):** Lauren AgriSystems' patented vent design minimizes clogging and ensures uniform milk flow.

- We offer standard vented, reduced-airflow vented and nonvented liners, with or without silicone-reinforced short milk tubes.

Ordering Specifications

Part #	Description	Quantity (per box)
10104	Liner - NT	100
10124	Liner - NT NV	100
10106	Liner - SI	100
10126	Liner - SI NV	100
10109	Liner, NTRA	100
10110	Liner, SIRA	100

What others are saying...

We thought we were doing a fairly good job with our conventional black inflations, but we were never satisfied with our teat end health. We tried Lauren Liners, and within a very short period of time, we noticed a dramatic difference in our teat ends. We also like the fact that liner squawks have virtually been eliminated.
