

Trusted quality. Superior performance.

A solution for all milk hose applications, Lauren AgriSystems' premium milk hose is designed for optimum cleanability, reduced kinking and superior durability. It maintains smooth inner and outer surfaces, resisting degradation from common chemicals used in wash cycles under normal operating conditions. The unique benefits offered by Lauren AgriSystems' milk hose come from merging decades of extrusion experience with our DairyGrade® silicone compound.

DairyGrade Compound

- No plasticizers are used in blend
- Nonhalogenated
- Ultra-low carbon content
- No leaching
- Meets FDA CFR21 177.2600 and 3-A 18-03 standards
- Bisphenol A (BPA) and phthalate-free

Flexible and kink-resistant

Remains pliable during hot and cold temperature extremes, providing consistent feel regardless of environmental condition.

Durable

Long-lasting hose material maintains performance through superior chemical resistance and increased wall thickness.

Easy to clean

DairyGrade silicone compound meets 3-A standards and maintains a smooth interior and exterior surface to reduce the buildup of bacteria.

Common uses

This premium solution is recommended for all milk hose applications in a parlor.

Lauren Premium Milk Hose

Milk Hose Features

Lauren AgriSystems' DairyGrade® silicone blend meets 3-A standards and provides resistance to bacteria growth. This superior material also reduces hose kinks and tears, maintaining consistent milk flow and lowering maintenance costs.

High tear strength: Precipitated silica is used as a high-grade base, ensuring a consistent mix and increasing the material's resistance to tearing.

Long-term flexibility: Proprietary modifiers are added during the blend process to improve the resilience and oxidation resistance of the hose.

Durometer: Fillers are carefully measured and added at specific levels to increase wall strength while not compromising flexibility.

Low odor: DairyGrade compound is a low-volatile, low-odor material that will not contaminate the milk supply.

Kink resistance: The balance of material durometer to wall thickness reduces kinking.

Our milk hose is available in two shapes:

- Thick-walled **round hose** available in 5/8", 3/4" and 7/8" inside diameter.
- **Premium Tri-Circle®** milk hose with kink-reducing ribs is ideal for tight-radiused applications.

What others are saying...

Material design and quality matter when choosing components for your parlor. That is why we choose to partner with companies like Lauren AgriSystems to provide our customers with the highest-quality products available.
